# Final Version and Testing

Create a final version of the videogame: add a point system, sound effects and music, and test the app.

Add the last functions:

- Adding points
- Main menu and start button
- Player wins with 3 points + Message announcing the winner
- Game Over backdrop when the game ends
- Add sound effects and background music to your project.
- Test your video game

Create the main menu backdrop with AI

Use an AI tool like DALL-E or Copilot to create an illustration for the main manu backdrop.

- DALL-E
- Copilot

Important

Save the text of the prompt that you used to generate the illustration. You will have to submit it in the activity.

Music and Sound Effects

You can find music and sound effects here:

Music
